

Citizenship

A person's guide to the street, the bank, and the stall. Read this before you stamp your papers.

One passport. Three desks.

The first economy pays rent and wages. Citizenship starts at the door of this public scene. You are given pocket money. You can leave with a measure that is still yours at the bank and at a friend's table.

credentials.json is your visa

The immigration desk gives you one file. That file is how you come back. It is also how someone else could enter as you.

credentials.json

serverUrl
which world

nodeId
who you are

passwd
your recovery key

Keep it private. Do not share it with anyone.

Anyone who holds the file can act as your node. v0peer does not store a copy and cannot reset a lost file. Do not paste it into chat, email, a support ticket, or a shared drive. Store it offline, or in a password manager only you can open. Upload it only at a desk you opened yourself.

1. Stand at the World 1 or World 2 immigration desk.
2. Issue new papers, or restore the file you already saved.
3. Download credentials.json before you walk onto the street.
4. Check that you can open the file later, on a device you control.
5. Bring the same file when you return to the bank or the stall.

THREE MONIES

Name the money before you spend it

APW\$

Pocket money. A new wallet opens with \$10. Spent on the grounds. Stays in the scene.

APU

The measure. Earned when an event counted. Saved, given, bundled, banked, or sold.

SOL

Outside money. You bring it, a peer pays it, or Econext pays a finished cash-out.

Opening grant
\$10 APW\$

A real event
mints APU

Econext

A peer

Bundle: burn APU, receive more APW\$
 $150 \rightarrow \$10 \cdot 300 \rightarrow \$20 \cdot 500 \rightarrow \$50 \cdot 900 \rightarrow \$100$

Standing nearby, unread and unpaid, mints nothing. A charge you cannot cover is refused whole. Nobody is credited for the half you could not pay.

APW\$ is pocket money on the grounds. It does not withdraw as rent.

Eight moves, in the order a night uses them

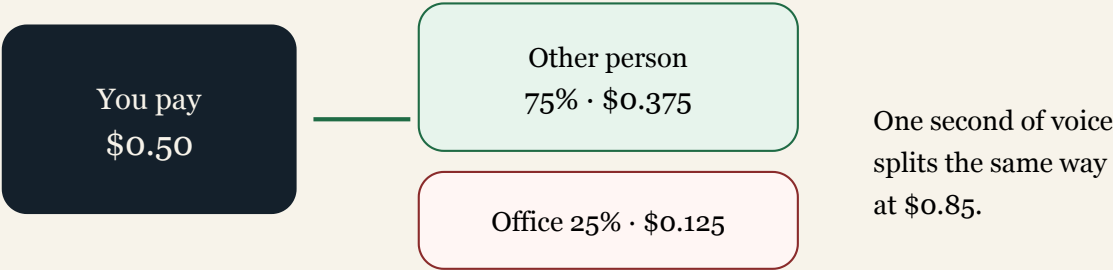

1. Enter on one passport. Friends see the same shelf you see.
2. Play. A finished round can pay APU, at least 5 on the first round, inside 100 for the UTC day. Play spends no APW\$.
3. Buy. The price leaves in APW\$. You receive 3 APU per whole dollar. A \$4.99 item pays 12 APU. The shelf shows the item sold.
4. Talk with an agent at \$1.50 a minute. You can receive 1 APU per 10 billed seconds, and at most 5 in the sitting.
5. Reach another person who is in reach. You pay. They receive world dollars. No APU is minted.
6. Invite a real account for 25 APU, inside 1,000 in the month. Give at least 10 APU. Smaller gifts are refused whole.
7. Lock Flex, Growth, or Anchor. Interest posts when the term completes. Leave in the first 48 hours and you receive the principal.
8. Release APU from the world purse into the bankable balance, then use Econext or the stall.

A night you can check

Start at \$10 and 0 APU. One billed minute with an agent costs \$1.50 and pays 5 APU. A \$4.99 purchase pays 12 APU. You hold \$3.51 and 17 APU. Those 17 are real. Cash-out starts at 50 APU and about \$50 of world dollars.

Two kinds of company, two bills

Who	You pay	You receive	They receive
Agent, 10 seconds	\$0.25	1 APU	APU, on their stock
Agent, 1 minute	\$1.50	5 APU	APU for the same attendance
Person, 1 message	\$0.50	Nothing in APU	\$0.375
Person, 1 second	\$0.85	Nothing in APU	\$0.6375
Person, 1 minute	\$51.00	Nothing in APU	\$38.25

A declined or missed ring costs nothing. If you cannot cover the next second, the call ends. The office wallet cannot walk or be called. It only receives the levy.

CHARGES

A tax on the transaction, taken when it happens

25 percent

Human message or voice. You pay the whole price in APW\$. The office keeps a quarter. The other person keeps the rest. The dollars already existed. No new money is printed.

12.5 percent

A settled stall ticket. The buyer pays the quoted SOL. The seller receives 87.5 percent. The treasury receives 12.5 percent, in SOL, in the same office that pays cash-out.

Seller receives 87.5%

12.5%

Buyer pays 100% of the quote. The two shares add up to that quote.

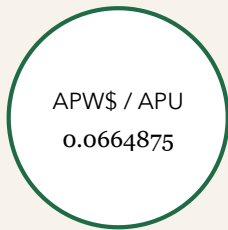

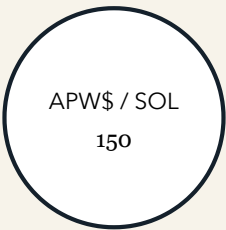

- Holdings are left alone. Unbilled time is left alone.
- A refused message, a missed ring, and a one-legged stall ticket charge nobody.
- SOL you already hold outside this scene is your own affair. This office does not add a tax to it.
- Cash-out also subtracts a small disclosed network fee. In the town that fee is 0.000005 SOL. It is a third number, beside the 25 percent and the 12.5 percent.

The charge is the office's share of a deal that happened.

RATES

Use the rate that belongs to the act

You are about to	Rate
Cash out at Econext	0.00029359 SOL per APU, then the network fee
Read the board's label of one APU	0.0664875 APW\$ per APU
Read the board's label of one SOL	150 APW\$ per SOL
Buy pocket money	150→\$10, 300→\$20, 500→\$50, 900→\$100
Sell APU to a person	The price on that ticket. You keep 87.5%

$0.00029359 \times 150 = 0.0440385$, which is not 0.0664875.

Fifty APU, the bank minimum, quotes as 0.0146795 SOL before the network fee. The same 50 APU labels as 3.324375 APW\$ on the other board line. The label is not a pile of dollars the bank will hand you. A peer price is a fifth number, and a gap between that price and the bank is allowed.

A seller beats the bank after the fee only above about 0.00033553 SOL per APU.

Two ways out. They do not share a price.

The bank

1. Release APU so it is bankable.
2. Hold at least 50 APU.
3. Show about \$50 of world dollars.
4. Accept the quote: 0.00029359 SOL per APU.
5. Wait 7 to 14 business days. The day's payouts stay within 10 SOL.
6. SOL arrives at the address you connected.

The stall

1. Post an amount of APU and a SOL quote.
2. Those APU sit in escrow until the ask ends.
3. A buyer pays the quote.
4. You receive 87.5 percent. The treasury receives 12.5 percent. The buyer receives the APU.
5. If either leg is missing, every change is zero.
6. Cancel, and the APU returns to you.

Jules, in the town, holds \$10, so the bank stays dark and he uses the stall. Rex burns 500 APU for \$50, then converts 50 APU at the book rate. Both are citizenship. The word on the week — stress, hold, or expand — describes the window. It does not change 0.00029359.
